

Materiality Assessment Worksheet

Step 1 of the ESG framework build. Purpose: produce a signed-off shortlist of the topics that genuinely matter to the business. Everything downstream (topics, metrics, targets) filters against this list.

Our position: voluntary reporting, investor audience → weight *financial materiality*

high, but still record impact materiality (double materiality) so the output is defensible.

> "Material" simply means "important enough to report on." A topic is material if it could

> reasonably affect the business's value (financial) or if the business affects people and

> the environment through it (impact).

How to use this

1. Fill Part A (context) — facts, one pass.
2. Gather Part B (stakeholder input) — interviews/surveys, no AI.
3. Populate Part C (long list) — start from your sector standard, then add.
4. Score in Part D — humans only. AI may summarise, never score.
5. Apply the threshold in Part E — result is the shortlist.
6. Sign off in Part F — Sustainability + Finance.

Rule: this is a business judgement. AI can help organise, but a named human decides.

Part A — Business context

Field	Answer
Legal entity / group	
Sector (and SASB industry code)	
Countries / regions of operation	
Key products / services	
Value chain footprint (upstream / downstream)	
Headcount	
Ownership (listed / private / PE-backed)	
Reporting period proposed	
Known investor expectations / ESG ratings coverage	

Part B — Stakeholder input

Record who you consulted and what they flagged. Evidence beats opinion.

Stakeholder group	Method (interview / survey / workshop)	Top concerns raised	Date
Investors / lenders			
Customers			
Employees			
Suppliers			
Regulators / community			

Part C — Long list of topics

Start from your sector standard, then add topics stakeholders raised. Keep codes so Part D is auditable.

#	Pillar	Topic	Sub-topic	Source (sector std / stakeholder)
1	E	Climate change	GHG emissions	
2	E	Climate change	Energy mix	
3	E	Natural resources	Water	
4	E	Pollution & waste	Waste & circularity	
5	E	Biodiversity	Land / habitat	
6	S	Labour	Health & safety	
7	S	Labour	Diversity & inclusion	
8	S	Human rights	Supply chain labour	
9	S	Community	Local impact	
10	S	Customers	Product safety & quality	
11	G	Governance	Board composition & oversight	
12	G	Governance	Business ethics & anti-bribery	
13	G	Governance	Data privacy & cybersecurity	
14	G	Governance	Tax transparency	
15	G	Governance	Executive remuneration	
–		_add rows as needed_		

Part D — Scoring

Score each topic 1–5 on both lenses. Weights: **financial 0.6, impact 0.4** (investor audience). Record who scored and the evidence for the top scores.

#	Topic	Financial (1–5, w 0.6)	Impact (1–5, w 0.4)	Weighted score	Evidence / rationale
1	GHG emissions				

#	Topic	Financial (1–5, w 0.6)	Impact (1–5, w 0.4)	Weighted score	Evidence / rationale
2	Energy mix				
3	Water				
4	Waste & circularity				
5	Biodiversity				
6	Health & safety				
7	Diversity & inclusion				
8	Supply chain labour				
9	Local impact				
10	Product safety				
11	Board composition				
12	Business ethics				
13	Data privacy & cyber				
14	Tax transparency				
15	Remuneration				
–					

Scoring guide (both lenses):

1 = negligible, 2 = minor, 3 = moderate, 4 = significant, 5 = severe / critical.

Part E — Threshold & shortlist

Set the cut-off explicitly so it isn't decided by accident.

Field	Answer
Weighted-score threshold for "material"	e.g. ≥ 3.5
Topics above threshold	
Topics below threshold but retained (why)	
Topics above threshold but excluded (why)	
Final material shortlist (codes)	

Part F — Sign-off

Role	Name	Decision	Date
Sustainability lead			
Finance lead			
Executive sponsor			

Sign-off confirms the shortlist is the agreed basis for all subsequent topic, metric, and

target selection. Changes after sign-off require a documented revision.
